

CLAIMS:

Sub
a1
1. An information display system comprising:
plural display means having storability; and
information sending means for sending information
to-be-displayed to the plural display means, wherein the
information sent from the information sending means is
displayable on the plural display means.

2. An information display system according to Claim 1,
wherein the display means are detachably attached to the
information sending means, and the information displayed on
the display means is kept even in a state where the display
means are detached from the information sending means.

3. An information display system according to Claim 1,
wherein the display means possesses setting information and
has a function of controlling whether or not it displays
information, in accordance with selection information from the
information sending means, and the information sending means
detects the setting information possessed by the display means
and sends the selection information along with the information
to-be-displayed on the basis of the setting information,
thereby to display the information on selected ones of the
display means.

4. An information display system according to Claim 3,
wherein the setting information contains information on a size

of the display means.

5. An information display system according to Claim 1, wherein the information sending means and the display means exchange information by a wireless system.

Sub
a2
6. ~~An information display system comprising:~~
plural display means having storability;
plural information writing means for writing information
to the display means; and

information sending means for sending the information which is to be displayed by the display means, to the plural information writing means, wherein the information sent from the information sending means can be displayed on the plural information display means.

7. An information display system according to Claim 6, wherein the display means are detachably attached to the information writing means, and the displayed information is kept even in a state where the display means are detached from the information writing means.

8. An information display system according to Claim 6, wherein the display means has a function of controlling whether or not it displays the information, in accordance with selection information from the information sending means, and the information sending means adds selection information, for selecting the information in the information writing means, to the information to-be-displayed and sends them together.

9. An information display system according to Claim 6, wherein the information writing means has a function of selecting the information sent from the information sending means, and the information sending means adds selection information for selecting the information in the information writing means, to the information to-be-displayed and sends them together.

10. An information display system according to Claim 9, wherein the information writing means holds setting information therein, and the information sending means has a function of collecting the setting information from the plural information writing means and adds the selection information to the information to-be-displayed on the basis of the collected setting information.

11. An information display system according to Claim 10, wherein the information writing means contains information on presence or absence of the display means, as the setting information.

12. An information display system according to Claim 6, wherein the information sending means and the information writing means exchange information by a wireless system.

13. An information display system according to Claim 1, further comprising:

image pickup means for reading an image, wherein the information sending means sends the image read by the image

pickup means, as the information which is to be displayed on the display means.

14. An information display system according to Claim 1, wherein the information sending means turns externally received information into an image and sends the image as the information which is to be displayed on the display means.
